Pablo Albín

Full Stack Web Developer

Email: pablo.albin88@gmail.com   Cel. +59891436300   Salto – Uruguay

LinkedIn   Github   Portfolio

TECHNOLOGIES:

HTML5, CSS3, Javascript, TypeScript, Java, PHP, Angular, React, Node, Laravel, Springboot, NestJs, React Native, Figma, Boostrap, Sass, Scrum, AWS, Docker.

WORK EXPERIENCE:

Full Stack Developer

TechnoApes - Full time   10/2023 - Present

- Developed new websites and APIs for efficient client and staff management, enhancing user tracking and administration.
- Implemented APIs for process automation, optimizing workflows and reducing operation times.
- Collaborated on improving existing modules, ensuring applications are scalable and adaptable to new requirements.
- Utilized TypeScript, Node.js, Angular, Spring Boot, and MySQL to ensure efficient and secure performance in each development.

   Skills: TypeScript - Node.js - Angular - Springboot - MySql - Figma - Amazon Web Services (AWS) - GitHub.

Full Stack Developer

SpicyTool · Full time   01/2023 – 10/2023

- Integrated the Google Ads API into the platform to enable real-time management and monitoring of digital marketing campaigns.
- Collaborated on enhancing various web modules, optimizing existing functionalities and improving the user experience.
- Developed new features on the platform, expanding capabilities for data management and analysis.
- Utilized PHP, Laravel, AWS, and WordPress to meet various project needs, ensuring efficient and scalable performance.

   Skills: PHP · Laravel - Amazon Web Services (AWS) · WordPress · JavaScript - React - MySql

Full Stack Developer
GoSocial · Full time   05/2022 – 12/2022

- Collaborated in the design and optimization of the PostgreSQL database to efficiently manage connections between donors and social causes.
- Developed the backend structure and multiple endpoints in Node.js, ensuring secure and fast data management between users and social causes.
- Implemented the frontend in React, focusing on an intuitive and accessible interface to enhance user navigation and engagement.
- Participated in integrating external services for real-time notifications, improving communication between users and the platform.
- Utilized TypeScript across the stack to ensure a robust codebase and minimize development errors.

    Aptitudes: TypeScript - Node.js - React - MySql - Figma - Amazon
                  Web Services (AWS) - GitHub.

PROJECTS:

SocialSound

- Social network aimed at amateur musicians who want to spread their art and at the same time connect and learn about the work of colleagues.
- It includes searches, filtering, ordering, user management, payment gateway, email notifications, administrator dashboard, rating system, reviews, among others.
- Technologies used: Javascript - CSS - React.js - Redux - Material UI - Firebase - Nodemailer - Stripe - Bcrypt – PostgreSQL.

[Repository](#)   [Deploy](#)

Pokemons App

- Pokemons App that includes: searches, filtering, ordering and validated form.
- Possibility for the user to create their own pokemons.
- Connection with an API to obtain existing pokemon data.
- Database where existing pokemons and those created by the user are saved.
- Technologies used: React, Redux, CSS, Node.js, Express, PostgreSQL and Sequelize.

[Repository](#)   [Deploy](#)

FruitApp

- Didactic game for android with arithmetic operations and different levels.
- The difficulty increases as the level progresses.
- Stores the highest score achieved and displays it on the main screen along with the user name.
- Developed in Java with gradle.

[Repository](#)   [Download APP](#)

DataSystem

- Desktop application for the management of business information, oriented to the sector of repair and maintenance of computer equipment.
- Allows you to register users, clients and teams.
- Save the information in a Database, either local or in the cloud.
- The system has three levels of access, where each user will be assigned to a different level, according to the role they play within the company: Administrator, Capturist or Technician.
- Allows you to create, update, and delete users, clients, and teams. As well as export them to a PDF file.
- The system allows you to view the information through tables with the possibility of filtering the content according to its status (in the case of teams).
- You can see the statistics of the registered teams represented in graphs.

ACADEMIC BACKGROUND:

- **Full Stack Developer.** Henry Bootcamp. [Certificate](#). 2022.
  - 700 hours of theoretical-practical course.
  - Data structures and algorithms, ReactJs, Redux, NodeJs, web server, advanced promises, express, async await, testing. DBMS, SQL, ORM, authentication.
- **Programmer analyst.** ORT University. 2018-2020.
  - The degree is oriented towards the development of systems that collaborate with each other, aligned with the real needs of the business and contemplating innovation as the engine of change.
- [Java. Computer pills.](#). 2021
  - Create professional JSE and JEE applications. Threads, sockets, stacks, collections, swing, JavaFx, databases with JDBC, JSP, servlets.
- [Spring. Computer pills](#). 2022
  - Inversion of control, dependency injection, Java annotations, web applications, MVC form tags, form validation, hibernate, aspect-oriented programming, maven, security.
- [Angular. Computer pills](#). 2022
  - Components, interpolation, binding, directives, communication between components, services, routing, databases, firebase, login, page protection, application deployment.

LANGUAGES:
- Inglés B2 – Intermediate. [Certificate](#)
- Spanish – Native.

PROFICIENCYS:
- Autodidact.
- Teamwork.
- Resolutive.
- Good communication skills.
- Proactive.
